

We have a website under wordpress, for which we need some modifications and customization.

Among other things, we want to:

- Retravailler the layout of the announcements (<http://cubaaz.com/listings/hostal-martilu/>)
- Redo the main Dashboard, so that it is exactly as on the website www.airbnb.com (with the same options)
- Make the layout of emails automatic (woocommerce).
- Install the theme <https://demo.tagdiv.com/newsmag/> or <https://demo.tagdiv.com/newsmag/discover-the-10-best-hairstyles-according-to-your-face-shape/> for The news section of www.blog.cubaaz.com (at the bottom of the page)
- Ensure that ads from <http://advisor.cubaaz.com/all-advisors/> automatically rank according to the comments notes. For example, if I look for a restaurant in Habana, the first results should be those with the 5/5 rating, after 4.9 / 5 ect Results a bit like here https://www.tripadvisor.fr/Restaurants-g147271-Havana_Ciudad_de_la_Habana_Province_Cuba.html.
- It also requires a ranking by type of cuisine as on tripadvisor https://www.tripadvisor.com/Restaurants-g147271-Havana_Ciudad_de_la_Habana_Province_Cuba.html and that the homepage of www.advisor.cubaaz.com looks like its: [http : //www.lahabana.com/guide/havana-guide-home/restaurants/](http://www.lahabana.com/guide/havana-guide-home/restaurants/)

As well as download new data into the database.

Can you do this work?
